Become a part of our application networks!

Do you want your application-oriented research to be a building block in new (European) projects and thus gain funding for your research and development?

Then get in touch with us: info@edacentrum [dot] de

You will become an integral part of our European application-oriented networks for the applications automotive, energy, industrial automation, communications, medical, and mobility.

With its strong experience in supporting many national and international projects, the edacentrum offers an optimal opportunity for establishing these application-oriented networks leading to projects. The edacentrum will assume the construction, support and maintenance of these networks, which will provide best conditions for establishing project consortia and for the application of new (European) projects. At the same time, these networks create the basis for an integrated system development and will improve the conditions for the (industrial) use of microelectronics as Key Enabling Technology (KET).

To this extend the edacentrum will link its existing network, consisting of System, Semiconductor and EDA companies, with new partners from relevant applications and help to identify research topics and consortia. To ensure sustainability and regular information exchange workshops and application-related internet sites will be provided.

Become a part of these application networks and take a pole position for your next research project!
