edaWorkshop13 and CATRENE DTC - Program online

[1]

Hannover - The edaWorkshop [2] this year is jointly organized with the CATRENE Design Technology Conference and takes place on **May 14-16** in Dresden. Look forward to an interesting program [3] with 11 sessions on various issues with more than 30 presentations. The registration is possible per Fax [4] from now on, and will be possible online here [5] from March 27th. We look forward to welcome you in Dresden.

The edaWorkshop is the premier German EDA event for the publication and discussion of application-oriented EDA research findings. The mix of representatives from industry and research creates ideal opportunities for a professional exchange of ideas on a scientific basis. The dialog can pave the way for industry to benefit from research results.

edaWorkshop is also the primary platform for presenting and exchanging solution approaches and results of EDA projects funded by the BMBF (German Ministry of Education and Research). It promotes communication between EDA experts and public authorities, and supports the dissemination of the results of publicly-funded projects. (more Information [6])
