## edaWorkshop18 - Program and Registration online

Hannover - The [edaWorkshop18](#) <sup>[2]</sup> takes place on **May 16-17** in Hannover. Look forward to an interesting **program** <sup>[3]</sup> (in German only) including keynotes by **Subhasish Mitra** (Stanford University) and by **Hai (Helen) Li** (Duke University). From now on, the **registration** (in German only) is possible [here](#) <sup>[4]</sup>. We look forward to welcome you in Hannover. (Please note: This year, the conference language will be German.)

The edaWorkshop is the premier German EDA event for the publication and discussion of application-oriented EDA research findings. The mix of representatives from industry and research creates ideal opportunities for a professional exchange of ideas on a scientific basis. The dialog can pave the way for industry to benefit from research results.

edaWorkshop is also the primary platform for presenting and exchanging solution approaches and results of EDA projects funded by the BMBF (German Ministry of Education and Research). It promotes communication between EDA experts and public authorities, and supports the dissemination of the results of publicly-funded projects. ([more Information](#) <sup>[5]</sup>)
