Knowledge Center

The edacentrum's primary mission is to be a focal point for EDA matters in Germany. In this role, it provides a variety of information about EDA through a number of channels including: [press relations](#) ^[1] in general and through its dedicated, topical newsletter, [newsletter edacentrum](#) ^[2] (Website in German only) in particular. In addition, edacentrum participates in and/or publishes [studies and analyses](#) ^[3], and participates in the creation of industry [roadmaps and strategies](#) ^[4], both national and international. The edacentrum also regularly supports the EDA community in developing a strategy for research topics in Germany ([eDesign](#) ^[5]), from which the Federal Ministry for Education and Research also benefits.

In the "Knowledge Center" pages of this website, contents (partially password-protected) are ordered by category. The edacentrum also provides material for download, such as guidelines, logos, etc. as well as links to topics related to EDA and microelectronics.
