Application Networks

The direction and success of projects related to application areas important for Germany's economy, such as automotive, energy, industrial automation, communications, medical and security is a major focus for the edacentrum. The requirements and constraints of future product areas must be comprehended in the earliest planning and development phases.

The pages corresponding to the different applications (see menu on the left) contain thematically-sorted lists of organisations and associations that are active in these different application areas, as well as contact information.

If you notice missing organisations or associations, we would be grateful for a hint.

New: If you want your application-oriented research to be a building block in new (European) projects and thus gain funding for your research and development, then use our recently started activity to connect! ^[1]
